SUPERIOR DESIGN

Most major competitors feature a metal ring attachment system, which may damage the surface of a newly placed restoration. **Super-Snap's** superior design offers a completely flat polishing surface that will never harm a restoration, while also providing more surface area for faster polishing.

Super-Snap disks feature superior design

Super-Snap Disks are flexible and ultra-thin

PROVEN QUALITY AND SUPERIOR VALUE

Super-Snap sets the industry standard for finishing and polishing anterior composite restorations. Available in two diameters, simply go from the coarse grit to the fine grit in order to achieve a glossy finish. Even better, Super-Snap is 30% less expensive than the leading brand's disc polishing system.*

*Information is based on Henry Schein Dental Catalog.
